NEW YORK TIMES BESTSELLER - Thought leader, visionary, philanthropist, mystic, and yogi Sadhguru presents Western readers with a time-tested path to achieving absolute well-being: the classical science of yoga. NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY SPIRITUALITY & HEALTH The practice of hatha yoga, as we commonly know it, is but one of eight branches of the body of knowledge that is yoga. In fact, yoga is a sophisticated system of self-empowerment that is capable of harnessing and activating inner energies in such a way that your body and mind function at their optimal capacity. It is a means to create inner situations exactly the way you want them, turning you into the architect of your own joy. A yogi lives life in this expansive state, and in this transformative book Sadhguru tells the story of his own awakening, from a boy with an unusual affinity for the natural world to a young daredevil who crossed the Indian continent on his motorcycle. He relates the moment of his enlightenment on a mountaintop in southern India, where time stood still and he emerged radically changed. Today, as the founder of Isha, an organization devoted to humanitarian causes, he lights the path for millions. The term guru, he notes, means "dispeller of darkness, someone who opens the door for you. . . . As a guru, I have no doctrine to teach, no philosophy to impart, no belief to propagate. And that is because the only solution for all the ills that plague humanity is self-transformation. Self-transformation means that nothing of the old remains. It is a dimensional shift in the way you perceive and experience life." The wisdom distilled in this accessible, profound, and engaging book offers readers time-tested tools that are fresh, alive, and radiantly new. Inner Engineering presents a revolutionary way of thinking about our agency and our humanity and the opportunity to achieve nothing less than a life of joy. Praise for Sadhguru and Inner Engineering "Contrarian and consistent, ancient and contemporary, Inner Engineering is a loving invitation to live our best lives and a profound reassurance of why and how we can."--Sir Ken Robinson, author of The Element, Finding Your Element, and Out of Our Minds: Learning to Be Creative "I am inspired by Sadhguru's capacity for joy, his exuberance for life, and the depth and breadth of his curiosity and knowledge. His book is filled with moments of wonder, awe, and intellectual challenge. I highly recommend it for anyone interested in self-transformation."--Mark Hyman, M.D., director, Cleveland Clinic Center for Functional Medicine, and New York Times bestselling author "Inner Engineering is a fascinating read of Sadhguru's insights and his teachings. If you are ready, it is a tool to help awaken your own inner intelligence, the ultimate and supreme genius that mirrors the wisdom of the cosmos."--Deepak Chopra

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Contains the latest CPR guidelines! This program provides individuals who have a job-related duty to respond to emergencies with the knowledge and skills to recognize and provide care in respiratory and cardiac emergencies. These skills include performing two-rescuer CPR and techniques for special rescue situations, using resuscitation masks and bag-valve masks for ventilating victims, and minimizing the risk of disease transmission in emergency situations. This program also covers special situations professional rescuers are likely to encounter and the use of specialized equipment, most notably automated external defibrillators (AEDs).

Literature Review from the year 2017 in the subject Medicine - Hospital Environment, Clinical Medicine, grade: 1, Egerton University, language: English, abstract: Over the years, the American Heart Association has made outstanding contributions and numerous improvements to cardiopulmonary resuscitation and advanced cardiac life support guidelines. It is due to adequate use of resources and continuous research that millions of lives are saved in the United States. Such guidelines serve health care providers and other members of the healthcare team as a resource to ensure adequate and timely response to those individuals who experience cardiac or respiratory arrest. However, according to AHA statistics, "More than 326,000 people in the US suffer out-of-hospital cardiac arrests each year. Statistics prove that if more people knew CPR, more lives could be saved" (American Heart Association, 2016). In other words, dissemination of knowledge on the matter has direct outcomes on increasing survival rates. Therefore, the guidelines and the implementation methods are on continuous review based on new evidence. It is important to provide those who suffer cardiac or respiratory arrest with

timely services because delays could end up affecting the outcome of those who experience reversible damage. Healthcare providers around the world have become informed on the benefits of updated competence and direct patient outcomes and quality of care. The American Heart Association has published the new 2015 cardiopulmonary resuscitation guidelines, where changes and updates are reflected in an effort to put the best available evidence in practice. The purpose of this review is to compare the 2015 AHA updates with historical evidence in an attempt to explicate the implications and limitations of pharmacology in advanced cardiac life support.

The content in this handbook is in compliance with the latest 2020 guidelines recently released by the American Heart Association (AHA). All the protocols illustrated here are based on up-to-date evidence. These guidelines are updated every 5 years. This handbook is designed for all medical professionals who undergo ACLS training. It aims to establish a sound understanding of the principles of ACLS, and the latest guidelines.
