Making predictions about the future is always tricky. But there is one prediction that author Rob Bernshteyn is quite confident in making: Across a host of industries, we will move to a model that he calls value as a service. It is already common knowledge that many traditional-products companies are converting the delivery of their offerings to the as-a-service model. With the completion of this transition assumed, the

coming disruption will focus less on the delivery model and more on the value delivered. Value as a Service is the simple idea that measurable value delivered for customers will be the ultimate competitive battleground. Every customer will want to understand the exact value that they are being provided. They will want a quantifiable difference as they compare their options. Is your business ready to embrace this coming disruption? Are you ready?

The practice of enterprise application development has benefited from the emergence of many new enabling technologies. Multi-tiered object-oriented platforms, such as Java and .NET, have become commonplace. These new tools and technologies are capable of building powerful applications, but they are not easily implemented. Common failures in enterprise applications often occur because their developers do not understand the architectural lessons that experienced object developers have learned. Patterns of Enterprise Application Architecture is written in direct response to the stiff challenges that

face enterprise application developers. The author, noted object-oriented designer Martin Fowler, noticed that despite changes in technology--from Smalltalk to CORBA to Java to .NET--the same basic design ideas can be adapted and applied to solve common problems. With the help of an expert group of contributors, Martin distills over forty recurring solutions into patterns. The result is an indispensable handbook of solutions that are applicable to any enterprise application platform. This book is actually two books in one.
