While empirical evidence shows the positive effects of context-based learning approaches on students' interest, the long-term effects on student engagement have not been sufficiently highlighted up to now. Edited by respected chemistry education researchers, and with contributions from practitioners across the world, Engaging Learners with Chemistry sets out the approaches that have been successfully tested and implemented according to different criteria, including informative, interactive, and participatory engagement, while also considering citizenship and career perspectives. Bringing together the latest research in one volume, this book will be useful for chemistry teachers, researchers in chemistry education and professionals in the chemical industry seeking to attract students to careers in the chemical sector.

This book is for undergraduate and diploma chemistry students who are about to begin their project work. Student projects are now an essential part of most undergraduate and diploma chemistry courses in the UK, and are an important component of the later years of chemistry degree courses in Australia, South Africa and New Zealand. The book covers all aspects of project work, from choosing a suitable topic and supervisor to communicating research results effectively. There is advice on the best way to use libraries and on how to gather relevant references. Students are taught how to work safely and effectively, and to present their results in report, seminar or conference poster form. Additionally, the author offers guidance on engaging a keyboard operator, on how to prepare artwork and visual aids, and coaching tips on effective communication. The work is a distillation of the author's many years of

experience of guiding students of all abilities to success in their project work. This book should be of interest to second and third year undergraduates and diploma students in chemistry.

Technology-Enabled Blended Learning Experiences for Chemistry Education and Outreach discusses new technologies and their potential for the advancement of chemistry education, particularly in topics that are difficult to demonstrate in traditional 2d media. The book covers the theoretical background of technologies currently in use (such as virtual and augmented reality), introducing readers to the current landscape and providing a solid foundation on how technology can be usefully integrated in both learning and teaching chemistry content. Other sections cover the implementation of technology, how to design a curriculum, and how new tactics can be applied to both outreach and evaluation efforts.

Case studies supplement the information presented, providing the reader with practicable examples and applications of covered theories and technologies. Drawing on the broad experiences and unique insights of a global team of authors from a whole host of different backgrounds, the book aims to stimulate readers' creativity and inspire them to find their own novel applications of the techniques highlighted in this volume. Provides detailed information on the theoretical background of technology usage in chemistry education, including discussions of augmented and virtual reality Helps readers understand available options and make informed decisions on how to best utilize technology to enhance their chemistry teaching using concepts surrounding blended learning Presents examples of theory in practice through case studies that detail completed implementations from around the world
