Through a series of studies, the overarching aim of this book is to investigate if and how the digitalization/digital transformation process affects various welfare services provided by the public sector, and the ensuing implications thereof. Ultimately, this book seeks to understand if it is conceivable for digital advancement to result in the creation of private/non-governmental alternatives to welfare services, possibly in a manner that transcends national boundaries. This study also investigates the possible ramifications of

technological development for the public sector and the Western welfare society at large. This book takes its point of departure from the 2016 Organization for Economic Co-operation and Development (OECD) report that targets specific public service areas in which government needs to adopt new strategies not to fall behind. Specifically, this report emphasizes the focus on digitalization of health care/social care, education, and protection services, including the use of assistive technologies referred to as "digital welfare." Hence, this book explores the factors potentially leading to whether state actors could be overrun by other non-governmental actors, disrupting the current status quo of welfare services. The book seeks to provide an innovative,

enriching, and controversial take on society at large and how various aspects of the public sector can be, and are, affected by the ongoing digitalization process in a way that is not covered by extant literature on the market. This book takes its point of departure in Sweden given the fact that Sweden is one of the most digitalized countries in Europe, according to the Digital Economy and Society Index (DESI), making it a pertinent research case. However, as digitalization transcends national borders, large parts of the subject matter take on an international angle. This includes cases from several other countries around Europe as well as the United States.

our understanding of the dynamics of communication among different cultures. Through clear and precise examples, Dr. Theresa Paris' book succinctly exemplifies the basic broad differences of cultures and the importance of understanding cultural interaction in the workplace, based on work developed by Dr. Geert Hofstede, a pioneer and international leading scientist in the field of International Communication. These basic principles are applicable to most cultures. This book addresses topical questions concerning the legal framework of trade in services, and assesses how these issues are dealt with in GATS and in selected preferential trade agreements. In addition, the chapters discuss whether the differences and similarities (if any) are evidence of

greater coherence or greater divergence. The book combines the individual analyses to provide a more comprehensive picture of the current law on services trade liberalisation. A quarter of a century after the conclusion of the General Agreement on Trade and Services (GATS), international law on trade in services is still in a state of flux: on the one hand, countries increasingly conclude bilateral and regional trade agreements with sections on trade in services that aim at a further liberalisation of services trade. On the other, the GATS structure remains the dominant model and serves as the basis for many preferential trade agreements. In addition, new aspects such as electronic commerce, data protection and taxation are now emerging, while issues that had already manifested in the mid-1990s such as financial services

regulation, labour mobility, and telecommunications continue to be problematic. Usually, the debates focus on the question of whether preferential trade agreements serve as a stepping-stone or stumbling block for trade liberalisation at the multilateral level. However, it can be assumed that rules on trade in services in preferential trade agreements will coexist with the global GATS regime for the foreseeable future. This raises the question of whether we 're currently witnessing a drive towards greater coherence or more divergence in agreements on trade in services.

This book will be of particular interest to academics, policymakers, planners, and politicians. Section 1 introduces readers to the importance of blended research and innovation between sustainable SCM and consumer lifestyles for transformation towards a green economy. Section 2 addresses the question of how trends and developments in consumption behavior and lifestyles influence the development of sustainable logistics. Section 3 discusses the transformation potential towards

This practical and holistic approach to offering library resources and services to online patrons addresses multiple areas of service to online patrons, including reference, instruction, access, and marketing. Multimedia services are now commonly used in various activities in the daily lives of humans. Related application areas include services that allow access to large depositories of information, digital libraries, e-learning and e-education, e-government and e-governance, e-commerce and e-auctions, e-entertainment, e-health and e-medicine, and e-legal services, as well as their mobile counterparts (i.e., m-services). Despite the tremendous growth of multimedia services over the recent years, there is an increasing demand for their further development. This demand is driven by the ever-increasing desire of society for easy accessibility to information in friendly, personalized and adaptive environments. In this book at hand, we examine recent Advances in Recommender Systems. Recommender systems are crucial in multimedia services,

as they aim at protecting the service users from information overload. The book includes nine chapters, which present various recent research results in recommender systems. infrastructures and are grouped in topical sections on: e-Infrastructure, e-Services, e-Society, e-Health, and e-Security. Worldwide, postal and delivery economics is the subject of considerable interest. The postal industry's business model is in drastic need of change. Notably, the European Commission and member states are still wrestling with the problems of implementing liberalization of entry into postal markets, addressing digital competition, and maintaining the universal service obligation. In the United States, the Postal Accountability and Enhancement Act of 2006 has, perhaps, exacerbated some of the problems faced by the United States Postal Service (USPS). Currently, the USPS has serious financial problems because of difficulties it faces in making changes and the failure of the Act to address problems that have been long-standing. Electronic competition is severe and affects

post offices (POs) worldwide, which have been slow to address the threat. This book addresses this new reality and includes discussion of how POs may attempt to reinvent themselves.
