This book introduces the phenomenology and theory of hadron form factors in a consistent manner, deriving step-by-step the key equations, defining the form factors from the matrix elements of hadronic transitions and deriving their symmetry relations. Explained are several general concepts of particle theory and phenomenology exemplified by hadron form factors. The main emphasis here is on learning the analytical methods in particle phenomenology. Many examples of hadronic processes involving form factors are considered, from the pion electromagnetic scattering to heavy B-meson decays. In the second part of the book, modern techniques of the form factor calculation, based on the method of sum rules in the theory of strong interactions, quantum chromodynamics, are introduced in an accessible manner. This book will be a useful guide for graduate students and early-career researchers working in the field of particle phenomenology and experiments.
Features:
• The first book to address the phenomenology of hadron form factors at a pedagogical level in one coherent volume
• Contains up-to-date descriptions of the most important form factors of the electroweak transitions investigated in particle physics experiments

This volume presents fifteen original papers dealing with various aspects of causative constructions ranging from morphology to semantics with emphasis on language data from Central and South America. Informed by a better understanding of how different constructions are positioned both synchronically (e.g., on a semantic map) and diachronically (e.g., through grammaticalization processes), the volume affords a comprehensive up-to-date perspective on the perennial issues in the grammar of causation such as the distribution of competing causative morphemes, the meaning distinctions among them, and the overall form-meaning correlation. Morphosyntactic interactions of causatives with other phenomena such as incorporation and applicativization receive focused attention as such basic issues as the semantic distinction between direct and indirect causation and the typology of causative constructions.

Depth of knowledge (DOK) has become a priority for many schools. But if your understanding of DOK is a little cloudy, you're not alone. This resource is your one-stop-shop for learning what it is, who it's for, and how to use and sustain it. Ultimately, you will discover how to plan and provide learning experiences that are academically rigorous, socially and emotionally supportive, and student responsive. Learn how DOK is a different, deeper way of approaching teaching and learning. Explore the different DOK levels and how they relate to instruction. Understand DOK's relationship with standards and assessment. Designate correct levels based on learning needs. Acquire strategies for helping students engage with DOK on a deeper level. Contents: Introduction: What Depth of Knowledge Is Not Chapter 1: What Exactly Is Depth of Knowledge? Chapter 2: What Are DOK Teaching and Learning Experiences?

Chapter 3: How to Teach and Learn for Depth of Knowledge Chapter 4: How to Use Webb's DOK Levels as a Multi-Tiered System of Support Chapter 5: How to Deconstruct Learning Intentions for Depth of Knowledge Chapter 6: How to Designate the Depth of Knowledge Level Demanded Chapter 7: How to Construct DOK Learning Targets and Success Criteria Chapter 8: How to Ask and Address Good Questions for Depth of Knowledge Chapter 9: Let's Make a DOK! This book presents an in-depth linguistic description of one Papuan Malay variety, based on sixteen hours of recordings of spontaneous narratives and conversations between Papuan Malay speakers. 'Papuan Malay' refers to the easternmost varieties of Malay (Austronesian). They are spoken in the coastal areas of West Papua, the western part of the island of New Guinea. The variety described here is spoken along West Papua's northeast coast. Papuan Malay is the language of wider communication and the first or second language for an ever-increasing number of people of the area. While Papuan Malay is not officially recognized and therefore not used in formal government or educational settings or for religious preaching, it is used in all other domains, including unofficial use in formal settings, and, to some extent, in the public media. After a general introduction to the language, its setting, and history, this grammar discusses the following topics, building up from smaller grammatical constituents to larger ones: phonology, word formation, noun and prepositional phrases, verbal and nonverbal clauses, non-declarative clauses, and conjunctions and constituent combining. Of special interest to linguists, typologists, and Malay specialists are the following in-depth analyses and descriptions: affixation and its productivity across domains of language choice, reduplication and its gesamtbedeutung, personal pronouns and their adnominal uses, demonstratives and locatives and their extended uses, and adnominal possessive relations and their non- canonical uses. This study provides a point of comparison for further studies in other (Papuan) Malay varieties and a starting point for Papuan Malay language development efforts.

Focusing on the techniques by which the model can produce information about real observed phenomena, this book provides a detailed account of the Standard Model of particle physics. Following an account of the theory, the major part of the text is concerned with its application to the calculation of physical properties of particles.

***The series builds an extensive collection of high quality descriptions of languages around the world. Each volume offers a comprehensive grammatical description of a single language together with fully analyzed sample texts and, if appropriate, a word list and other relevant information which is available on the language in question. There are no restrictions as to language family or area, and although special attention is paid to hitherto undescribed languages, new and valuable treatments of better known languages are also included. No theoretical model is imposed on the authors; the only criterion is a high standard of scientific quality.***
