This little known classic history of flight-testing the Xplanes is reborn, sweepingly revised and updated with new and recently released information. Aviation enthusiasts will savor the most detailed account available of record-setting aircraft like the X-1 and XZ-15, flown by Chuck Yeager and other legends, as well as all the cutting-edge NASA and Defense Department programs that perfected the aeronautical concepts and technology used in US military, space, and commercial craft. A completely updated and reinterpreted text, three new chapters, dozens of rare photographs, and the complete statistical record of nearly six decades of testing make this required reading for anyone interested in manned flight.

In many countries wastewater treatment systems are hardly functioning or have a very low coverage, resulting in very poor quality water being used for irrigation and the cultivation of consumable produce. This can create significant risks to public health, particularly in expanding urban areas. Wastewater Irrigation and Health approaches this serious problem from a practical and realistic perspective, addressing the issues of health risk assessment and reduction in developing country settings. The book therefore complements other books on the topic of wastewater which tend to target high-end treatment options or merely report that wastewater irrigation is a common phenomenon. The editors of Wastewater Irrigation and Health move the focus onto quantifying risk in order to reduce it. It presents the state-of-the-art on low-cost options for health risk reduction in line with the multiple barrier approach of the 2006 guidelines published by the World Health Organization. The authorship includes a mix of agronomists and engineers who have been working closely with social scientists and health experts, from Africa, Asia, Europe, North America and Australia. The chapters highlight experiences across the developing world with case studies from different parts of sub-Saharan Africa (Ghana, Dakar, Mauritania, South Africa), Asia (India, Pakistan, Vietnam, Bangladesh), Mexico and MENA (Jordan, Tunisia). The book thus clearly establishes a connection between agriculture and sanitation, which is often the missing link in the current discussion on resource recovery.

Assessing and Mitigating Risk in Low-income Countries

Virtually every U.S. state allows some form of tax increment financing (TIF) -- using the increased property tax revenues generated by new development or real estate appreciation to fund economic development activities in the area that generates the revenues. Yet the fundamental attributes of TIF are still poorly understood, and its effectiveness is controversial. This report presents basic data about TIF usage, explains how it is intended to work, notes its conceptual strengths and limitations, reviews academic evaluations of its use, and suggests methods for improving its design.
