Education and Fascism

This text sets out to challenge the reader by posing the question: can we learn from history? More particularly, can we learn from social history and the effects on people living today after National Socialism - the German form of fascism?; Of crucial significance, the authors show how social education in all areas of national socialist society operated and how it functioned in terms of an interest in political formation and social discipline. What is clear is an attempt at complete social control, an unceasing incorporation of the whole lives of all people. At the centre of all these practices stood a process that was meant to lead to a particular formation of identity and ideology. The success of National Socialism in achieving its objectives must today cause us to investigate the relationship between identity and formation, political culture and pedagogic activity.

This volume contains papers contributed to the NATO Advanced Research Workshop "Nonlinear Evolution of Spatio-Temporal Structures in Dissipative Continuous Systems" held in Streitberg, Fed. Rep. Germany, Sept. 24 through 30, 1989. The purpose of the rather long title has been to focus attention on a particularly fruitful direction of research within the broad field covered by terms like Nonlinear Dynamics or Non-Equilibrium Systems. After physicists have been occupied for several decades mainly with the microscopic structure of matter, recent years have witnessed a resurgence of interest in macroscopic patterns and dynamics. Research on these latter phenomena has not been dormant, of course, since fluid dynamicists interested in the origin of turbulence, meteorologists studying weather patterns and numerous other scientists have continued to advance the understanding of the structures relevant to their disciplines. The recent progress in the dynamics of nonl inear systems wi th few degrees of freedom and the discovery of universal laws such as the Feigenbaum scaling of period-doubling cascades has given rise to new hopes for the understanding of common principles underlying the spontaneous formation of structures in extended continuous systems.

International Taxation of Income from Services under Double Taxation Conventions

The two-volume Emergency Medical Services: Clinical Practice and Systems Oversight delivers a thorough foundation upon which to succeed as an EMS medical director and prepare for the NAEMSP National EMS Medical Directors Course and Practicum. Focusing on EMS in the 'real world', the book offers specific management tools that will be useful in the reader's own local EMS system and provides contextual understanding of how EMS functions within the broader emergency care system at a state, local, and national level. The two volumes offer the core knowledge trainees will need to successfully complete their training and begin their career as EMS physicians, regardless of the EMS systems in use in their areas. A companion website rounds out the book's offerings with audio and video clips of EMS best practice in action. Readers will also benefit from the inclusion of: A thorough introduction to the history of EMS An exploration of EMS airway management, including procedures and challenges, as well as how to manage ventilation, oxygenation, and breathing in patients, including cases of respiratory distress Practical discussions of medical problems, including the challenges posed by the undifferentiated patient, altered mental status, cardiac arrest and dysrhythmias, seizures, stroke, and allergic reactions An examination of EMS systems, structure, and leadership

"This book explores areas such as strategy development, service contracts, human capital management, leadership, management, marketing, e-government, and e-commerce"--Provided by publisher.

Service Science Research, Strategy and Innovation: Dynamic Knowledge Management Methods

Pervasive and Ubiquitous Technology Innovations for Ambient Intelligence Environments

The aim of CoreGRID is to strengthen and advance scientific and technological excellence in the area of Grid and Peer-to-Peer technologies in order to overcome the current fragmentation and duplication of effort in this area. To achieve this objective, the workshop brought together a critical mass of well-established researchers from a number of institutions which have all constructed an ambitious joint program of activities. Priority in the workshop was given to work conducted in collaboration between partners from different research institutions and to promising research proposals that could foster such collaboration in the future.

Ambient intelligence began as a vision for the future of technology and has now become a reality. The widespread use of modern technology has quickly expanded into the use of our everyday lives. On a daily basis, we are instantly connected to people, places, ideas, and information which have led to the acceleration of knowledge. As the continuing development of new technologies becomes available, those technologies will play an integral role in the future. Pervasive and Ubiquitous Technology Innovations for Ambient Intelligence Environments is a collection of research on the subject matter of human computer interaction, ubiquitous computing, embedded systems, and other areas of study which contribute to ambient intelligence. This comprehensive reference aims to broaden the overall knowledge on ambient intelligence as it relates to the aspects of modern life.

"Stellenbosch faces the same challenges that most South African urban areas face: rapid urbanisation, sluggish economic growth, growing inequalities, unsustainable use of natural resources, deteriorating biodiversity, social problems, unhealthy living, insecure supplies of healthy food, degrading soils, infrastructure backlogs and inadequate urban planning. At the same time, Stellenbosch has tremendous potential. It brings together in one beautiful place extra-ordinary intellectual capacity, social diversity, financial resources, creative potential, high value eco-systems, spiritual energy and some of South Africa's most vibrant grassroots social movements in its poorest areas. The brief given to the writers was to examine the current challenges and discuss what needs to change in the way we think about these challenges to ensure more positive and sustainable long-term outcomes. This is, therefore, a contribution that aims to further open up and widen recent dialogues about the future that Stellenbosch deserves"--Back cover.

Health Services Reports

Foreign Service List

The provision of international services has increased enormously, mainly due to the precipitous growth of the digital economy. Accordingly, the interpretation and application of double taxation conventions (DTCs) to income from services has become a dominant focus in the international taxation. This multiple-award-winning book is an indispensable tool for practitioners and a major contribution to the debate about tax reform. It responds to the need for a comprehensive overview of the tax opportunities and risks relating to the provision of international services. It also offers the rst in-depth analysis of the taxation of income from services vis-à-vis the multilateral instrument (MLI) resulting from the OECD's Base Erosion and Profit Shifting (BEPS) initiative. With the thorough analysis of the international taxation of income from services over the last two centuries, the author sheds new light on present tax policy debates and develops workable proposals for bringing brick-and-mortar DTCs into the digital reality. With an abundance of case studies, treaty interpretations, appraisals of policy discussions, and practical solutions, the author examines every aspect of the subject, including the following: – the Model DTCs of the OECD, the United Nations, Germany, and the United States, their similarities and differences; – relationships among the MLI, the Model DTCs, and specific DTCs; – development of the provisions dealing with services in the DTCs; – how tax authorities and courts of different countries (e.g., the United States, Germany, Brazil, India, and China) apply DTC provisions on the taxation of international services; – opportunities and risks relating to different business practices, such as the subcontracting of services provisions, the hiring-out of labour, the secondment of employees, and the engagement of contract and toll manufacturers; – practical questions about the taxation of different distribution models – from fully edged distributors to commissionaires; – challenges and proposals relating to the differentiation between various types of services under DTCs; – the permanent establishment concept; – to what extent the structure, purposes, and scope of DTCs differ from those of the General Agreement on Trade in Services (GATS); – how changes in the US Model DTC of 2016 affect international service provisions; and – proposed changes to amending the OECD and UN Model DTCs. Viable proposals to simplify DTC provisions dealing with service income and align them with current challenges such as the digital economy and the increasing volume of remote services are offered.

fundamentals in the major revolution currently underway. particularly in light of the likely impact of the 'BEPS package' and its subsequent MLI. This book is poised to become one of the key practice resources for tax lawyers, in-house counsel, and policymakers in the coming years. Interested academics too will benefit from the author's skill in recognizing the ongoing role of taxation
