Following his much-acclaimed The Baroque Clarinet and The Clarinet in the Classical Period, Albert R. Rice now turns his signature detailed attention to large clarinets - the clarinet d'amour, the basset horn, the alto clarinet, bass and contra bass clarinets. Each chapter is devoted to a specific instrument, and offers a fascinating insider's look at its defining characteristics, a comprehensive history of its evolution, meticulously-researched information on its makers and aspects of construction, and a thorough discussion of its music. Rice illustrates how the introduction of large clarinets into chamber ensembles, wind bands, and opera orchestras was the result of experiments meant to address specific musical needs. Along the way, he brings to life the musicians, virtuosi, soloists, and orchestral and band musicians, as well as the instruments' makers and the composers from J. C. Bach to Smetana who wrote for them. Based on careful study of primary sources - musical compositions, patents, memoirs and diaries, and unfettered access to historical instruments themselves--Rice's expert presentation is nothing short of exhaustive. From the Clarinet d'Amour to the Contrabass will engage all who love the clarinet and its music.

Dante has worked at Omega for Hire as an escort for a while now. People usually hire him for short term gigs, mostly as arm candy to parties and dinners. But an unexpected heat and some misplaced suppressants might just turn this temporary situation into a permanent one.

First Awakenings

'Forget the label "free trade agreement". The TPPA, under negotiation between New Zealand, the USA and ten other countries, is a direct assault on our right to decide our own future.' In this hard-hitting BWB Text, Professor Jane Kelsey picks apart the current negotiations surrounding the proposed Trans-Pacific Partnership Agreement (TPPA) and comes to some disturbing conclusions. Such a treaty, she says in this new work, has little credible economic rationale but could have potentially dangerous effects on our ability to decide for ourselves how we address the economic, environmental, social and Treaty challenges of the twenty-first century. At a time of constitutional review, the secrecy surrounding the TPPA negotiations raises hard questions about the future shape of New Zealand.

"A superior book. . . . Many readers will be surprised to see that today's arguments about history education follow the culture wars that go back to almost the beginning of the republic. Moreau's writing is engaging, with brilliant flashes of insight, as well as balance and wit." -Gary B. Nash, Director of the National Center for History in the Schools
Taking Frances FitzGerald's textbook study America Revised as a point of departure, Joseph Moreau in Schoolbook Nation challenges FitzGerald's premise that the 1960s were the beginning of the end of the glory days of American history education. Moreau recounts how in the late twentieth century, cultural commentators such as historian Arthur Schlesinger Jr. and politician Newt Gingrich preached that a new identity crisis had shaken American history in the sixties, and that the grand unified view of our past had given way to various interest groups, who dismantled the old national narrative while demanding a more "inclusive" curriculum for their children. Moreau discovered, however, that American history, while grand, has never been unified. Delving into more than 100 history books from the last 150 years, the author reveals that the efforts of pressure groups to influence the history curriculum are nearly as old as the mustiest textbook. "For those who would influence textbooks and teaching-Protestant elites in the 1870s, Irish-Americans in the 1920s, and conservative politicians today-the sky has always been falling," according to Moreau. Schoolbook Nation offers a history lesson of its own: when the story of the past is written or rewritten, truth is often a victim. With its comprehensive treatment of the subjects of honesty and politics in the teaching of history, this is an essential book on the side of truth in a complex debate.

Spectroscopy is the study of electromagnetic radiation and its interaction with solid, liquid, gas and plasma. It is one of the widely used analytical techniques to study the structure of atoms and molecules. The technique is also employed to obtain information about atoms and molecules as a result of their distinctive spectra. The fast-spreading field of spectroscopic applications has made a noteworthy influence on many disciplines, including energy research, chemical processing, environmental protection and medicine. This book aims to introduce students to the topic of spectroscopy. The author has avoided the mathematical aspects of the subject as far as possible; they appear in the text only when inevitable. Including topics such as time-dependent perturbation theory, laser action and applications of Group Theory in interpretation of spectra, the book offers a detailed coverage of the basic concepts and applications of spectroscopy.
