Practitioners, scholars, and teacher education students alike can celebrate reading Exploring Inclusive Educational Practices through Professional Inquiry. This rich array of case scenarios both illuminates and elaborates the meaning of inclusion in today's schools and tomorrow's visions. Twenty-five stories from parents, teachers, school principals, and specialists highlight the kind of experiential knowledge that won't be found in typical research reports and district documents about inclusive education. What happens to real people—students and their families—doesn't always resemble policies that can look so good on paper. This book makes a wonderful contribution to better understandings of the challenges of inclusion as well as the commitments positioned alongside values in order to meet those challenges. There are brave and spirited people in these pages—not the least of whom are the children themselves. Professor Luanna H. Meyer, PhD Director, Jessie Hetherington Centre for Educational Research Victoria University, New Zealand This is a book on inclusive education that leaves you with hope and ideas for action. It takes a very difficult and highly charged topic and demonstrates that it is possible to see both the trees and the forest. Michael Fullan Professor Emeritus OISE/University of Toronto We are reminded in the commentaries parents share in this book of how their passionate commitment to good education and their ideas make inclusion work. The case-study approach reveals the critical importance of their, and many other perspectives in finding solutions to what are so often dismissed as irresolvable dilemmas. They aren't, and this book models exactly the kinds of conversations we need in schools across the country to challenge all of us to stay the course. It's a must-read for anyone who wants to make diversity and inclusion a reality in public education today. Michael

Based on a large-scale international study of teachers in Los Angeles, Chicago, Ontario, and New York, this book illustrates the ways increased use of high-stakes standardized testing is fundamentally changing education in the US and Canada with a negative overall impact on the way teachers teach and students learn. Standardized testing makes understanding students' strengths and weaknesses more difficult, and class time spent on testing consumes scarce time and attention needed to support the success of all students—further disadvantaging ELLs, students with exceptionalities, low income, and racially minoritized students.

Marion Nicoll (1909-1985) is a widely acknowledged and important founder of Alberta art and certainly one of a dedicated few that brought abstraction into practice in the province. Her life and career is a story of determination, of dedication to her vision regardless of professional or personal challenges. Nicoll became the first woman instructor hired at the Provincial Institute of Art and Technology (now the Alberta College of Art and Design) - and although limited to teaching craft and design, she became a significant mentor for generations of artists. Contributions by Ann Davis, Elizabeth Herbert, and Jennifer Salahub.

The first book in Laura Ingalls Wilder's treasured Little House series—now available as an ebook! This digital version features Garth Williams's classic illustrations, which appear in vibrant full color on a full-color device and in rich black-and-white on all other devices. This beloved story of a pioneer girl and her family begins in 1871 in a log cabin on the edge of the Big Woods of Wisconsin. Four-year-old Laura lives in the little house with her Pa, her Ma, her sisters Mary and Carrie, and their dog, Jack.

Pioneer life is sometimes hard for the family, but it is also exciting as they celebrate Christmas with homemade toys and treats,

do the spring planting, bring in the harvest, and make their first trip into town. And every night Laura and her family are safe and warm in their little house, with the happy sound of Pa ' s fiddle to send them off to sleep. The nine Little House books are inspired by Laura ' s own childhood and have been cherished by generations of readers as both a unique glimpse into America ' s frontier history and as heartwarming, unforgettable stories. Carcinoma of the prostate increasingly dominates the attention of urologists for both scientific and clinical reasons. The search for an explanation and the prediction of the variable behaviour of the malignant prostatic cell continues unabated. The search for more precise tumour staging and more effective treatment is equally vigorous. Editors Andrew Bruce and John Trachtenberg have assembled acknowledged leaders in prostate cancer to present those areas of direct interest to the clinician. There are a number of other topics that might have been considered but most of these, such as experimental tumour models or biochemical factors affecting cell growth, still lack immediate application for the clinician. Carcinoma of the prostate continues to have its highest incidence in the western world, and the difference in comparison with the incidence in the Far East appears to be real and not masked by diagnostic or other factors. A number of other epidemiological aspects need careful analysis: Is the incidence increasing? Is the survival improving? Is the prognosis worse in the younger patient? Epidemiological data are easily misused and misinterpreted so that a precise analysis of the known facts makes an important opening chapter to this book.

This reference text covers the latest developments in biochar materials research, a field which is becoming increasingly popular due to the potential of biochar to replace carbon materials derived from non-renewable sources. Emerging and innovative applications of biochar materials are discussed, and all aspects of the field are covered, from production to applications, including details on the techniques used. There is a particular focus on biochar as a material for composites and sensors. This is the first book to cover emerging applications of biochar as an innovative, versatile, carbon-based renewable material, beyond its traditional uses in agriculture. It is a valuable reference for all researchers in the fields of biochar and carbon materials, including industry practitioners. Key Features ? After an overview of major scientific discoveries of the 18th and 19th centuries, which created electrical science as we know and understand it and led to its useful applications in energy conversion, transmission, manufacturing industry and communications, this Circuits and Systems History book fills a gap in published literature by providing a record of the many outstanding scientists, mathematicians and engineers who laid the foundations of Circuit Theory and Filter Design from the mid-20th Century. Additionally, the book records the history of the IEEE Circuits and Systems Society from its origins as the small Circuit Theory Group of the Institute of Radio Engineers (IRE), which merged with the American Institute of Electrical Engineers (AIEE) to form IEEE in 1963, to the large and broad-coverage worldwide IEEE Society which it is today. Many authors from many countries contributed to the creation of this book, working to a very tight time-schedule. The result is a substantial contribution to their enthusiasm and expertise which it is hoped that readers will find both interesting and useful. It is sure that in such a book omissions will be found and in the space and time available, much valuable material had to be left out. It is hoped that this book will stimulate an interest in the marvellous heritage and contributions that have come from the many outstanding people who worked in the Circuits and Systems area.

Artificial Intelligence in Education

There are a number of marvelous books that address the topic of the case method. If you are interested in facilitating cases, you can look to the classic book *Teaching and the Case Method* by Louis Barnes, C. Roland Christensen and Abby Hansen (1994). The collection of essays on the subject, *Education for Judgment: The Artistry of Discussion Leadership* by C. Roland Christensen, David Garvin and Ann Sweet (1991) is a wonderful and inspiring read as well. If your interest is case-based research, it would be nearly impossible to find a more authoritative source than Robert Yin ' s (2009, 4th Edition) *Case Study Research: Design and Methods*, which (at last count) has been cited nearly 29,000 times, according to Google Scholar. There is even a new entry to the field, William Ellet ' s (2007) *The Case Study Handbook: How to Read, Discuss, and Write Persuasively about Cases* that is specifically aimed at the student. At first glance, then, the topic of case studies in education and research seems to be pretty well covered. Do we really need another book on the subject? I write this book believing the answer is yes. While I have great affection for the classics, there are a number of issues facing most business faculty—not to mention faculty members from disciplines outside of business—that these books simply do not address. In writing this book, my intention is to offer some thoughts on some of these. Paradoxically, these omissions arise from the very fact that the authors of the classics are undisputed masters of their craft. Why this is a problem should become clear as I identify the three areas of focus for this book. The first issue that I feel must be considered is using the case method with a novice audience. Consider the following. When I was enrolled in the MBA program at Harvard Business School (HBS) in the early 1980s, the curriculum consisted of nearly 900 case discussion (15 per week) and—perhaps—as many as 20 class periods given over to lecture-style presentations. When I teach a case-method graduate course at my own institution, on the other hand, I am constrained to 11 case discussions (a 12 week semester). As it happens, I am also the only course in the entire program that employs pedagogy reasonably faithful to the case method, as it is normally defined. The math is very simple. By the last day of my semester, my students have as much experience discussing cases as I did on Thursday afternoon of the first week of my two year MBA program at HBS. With the exception of faculty teaching at those rare institutions that have chosen to widely adopt the case method, the situation I face is commonplace. The second concern that existing books raise for me is their tendency to focus on isolated topics. Specifically, case facilitation, case writing and case research are treated as separable activities. I would argue that these three aspects of the case method—which I define quite broadly—are inseparable. For institutions that wish to achieve the full set of benefits provided by the case method, all three activities must be pursued in parallel. Perhaps this is why so few institutions have achieved success through the case method. In this book, I will argue that achieving such integration is precisely why those rare institutions have been so successful. Once you start believing that the case method can be a key to institutional success, how you get there becomes a real challenge. At leading institutions featuring the case method, such as HBS, the philosophy is largely learned through a period of apprenticeship. For example, I did not encounter any of the references mentioned in the first paragraph—excepting Yin—at any time during my 5 year doctorate at HBS. Instead, I went out and wrote cases, facilitated discussions and did research under the guidance of faculty members who were masters of the craft. How can someone without the benefit of such an experience acquire such mastery? While I cannot offer any promises in this regard, I will at least provide some examples and easy-to-follow checklists that may be of service to individuals getting started.

The book, OLSAT Practice Test is designed for Kindergarten and 1st grade students. Apart from providing tools to prepare children for the standardized gifted and talented exams, we also want to make sure that the exercises are fun and attractive. We use colorful pictures and interactive matching exercises to help children learn the necessary ideas for the test. Early education plays a significant role in the child's attitude towards learning for the rest of his or her life. When they are young, children are naturally curious and desire to explore everything. Many states in our country have created special gifted and talented programs to allow children access to a more vigorous education. To accept students to the programs, most school systems require children to take tests. The OLSAT is one of the most common tests used across the country for entry into gifted and talented school programs. The test is designed to assess Verbal Comprehension, Verbal Reasoning, Pictorial Reasoning, Figural Reasoning, and Quantitative Reasoning. Our goal is assist you in your journey to supporting the motivation, learning and development of your child.

This two volume set LNAI 10947 and LNAI 10948 constitutes the proceedings of the 19th International Conference on Artificial Intelligence in Education, AIED 2018, held in London, UK, in June 2018. The 45 full papers presented in this book together with 76 poster papers, 11 young researchers tracks, 14 industry papers and 10 workshop papers were carefully reviewed and selected from 192 submissions. The conference provides opportunities for the cross-fertilization of approaches, techniques and ideas from the many fields that comprise AIED, including computer science, cognitive and learning sciences, education, game design, psychology, sociology, linguistics as well as many domain-specific areas. Thomas Gilovich offers a wise and readable guide to the fallacy of the obvious in everyday life. When can we trust what we believe—that "teams and players have winning streaks," that "flattery works," or that "the more people who agree, the more likely they are to be right"—and when are such beliefs suspect? Thomas Gilovich offers a guide to the fallacy of the obvious in everyday life. Illustrating his points with examples, and supporting them with the latest research findings, he documents the cognitive, social, and motivational processes that distort our thoughts, beliefs, judgments and decisions. In a rapidly changing world, the biases and stereotypes that help us process an overload of complex

information inevitably distort what we would like to believe is reality. Awareness of our propensity to make these systematic errors, Gilovich argues, is the first step to more effective analysis and action. Presents selections from papers from the third biennial ISATT Conference in 1986.
