An accessible guide to the most important academic writing skills a student needs to write successful undergraduate dissertations and project reports on any HE course. This book will give the reader a sound grounding on what the whole business of dissertation and report writing is about, and will provide instantaneous, easily accessible answers to specific questions on all of the most important areas of planning, researching, writing, revising and referencing a successful dissertation or report.

The foundation of quantitative genetics theory was developed during the last century and facilitated many successful breeding programs for cultivated plants and t-restrial livestock. The results have been almost universally impressive, and today nearly all agricultural production utilises genetically improved seed and animals. The aquaculture industry can learn a great deal from these experiences, because the basic theory behind selective breeding is the same for all species. The 7rst published selection experiments in aquaculture started in 1920 s to improve disease resistance in 7sh, but it was not before the 1970 s that the 7rst family based breeding program was initiated for Atlantic salmon in Norway by AKVAFORSK. Unfortunately, the subsequent implementation of selective breeding on a wider scale in aquaculture has been slow, and despite the dramatic gains that have been demonstrated in a number of species, less than 10% of world aquaculture production is currently based on improved stocks. For the long-term sustainability of aquaculture production, there is an urgent need to develop and implement e- cient breeding programs for all species under commercial production. The ability for aquaculture to successfully meet the demands of an ever increasing human p- ulation, will rely on genetically improved stocks that utilise feed, water and land resources in an e?cient way. Technological advances like genome sequences of aquaculture species, and advanced molecular methods means that there are new and exciting prospects for building on these well-established methods into the future.

The author of the best-selling Who Wrote the Bible? investigates the way God's visible presence gradually diminishes in the Bible, the famous declaration by Friedrich Nietzsche that "God is dead," and similar mysteries.

Selective Breeding in Aquaculture: an Introduction Theory and Engineering of Complex Systems and Dependability The Uganda Protectorate

Political, Social and Financial Shifts David Vizard's How to Port and Flow Test Cylinder Heads Photovoltaics For Professionals

"I'm tired of being compared. Like I'm supposed to follow what my peers are doing to achieve their kind of success, instead of doing what I really want to do in life." *** We often imagine our future to be built upon our goals and dreams, but presently it seems everyone else is ahead of us. One has a dream job as a career, one is about to start a beautiful family, and another is paving a wealthy future for himself. We start to wonder and find ourselves stuck at an intersection. Should we follow the path of others to gain success or can we define our own happiness? Deciding to go against the flow of the norm is scary because we are afraid to choose. What if we choose wrongly? What if we fail and ruin our future? In this book, Aiman Azlan takes readers on an explorative journey of owning one's life choices. It might not be a life like the others but in unfollowing the flow, perhaps we will be able to discover a life of meaning - one that is true to us.

The Marketing Book is everything you need to know but were afraid to ask about marketing. Divided into 25 chapters, each written by an expert in their field, it's a crash course in marketing theory and practice. From planning, strategy and research through to getting the marketing mix right, branding, promotions and even marketing for small to medium enterprises. This classic reference from renowned professors Michael Baker and Susan Hart was designed for student use, especially for professionals taking their CIM qualifications. Nevertheless, it is also invaluable for practitioners due to its modular approach. Each chapter is set out in a clean and concise way with plenty of diagrams and examples, so that you don't have to dig for the information you need. Much of this long-awaited seventh edition contains brand new chapters and a new selection of experts to bring you bang up to date with the latest in marketing thought. Also included are brand new content in direct, data and digital marketing, and social marketing. If you're a marketing student or practitioner with a question, this book should be the first place you look.

Contains papers presented at the symposium of the same name held in Bal Harbour, Fla., Oct. '87. A useful review. Annotation copyright Book News, Inc. Portland, Or.

Communicating for Business Text (large Print)

This book is mainly intended to meet the needs of undergraduate students of Civil Engineering. In preparing the first edition of this book, I had two principal aims: firstly to provide the student with a description of soil behavior-and of the effects of the clay minerals and the soil water on such behavior-which was rather more detailed than is usual in an elementary text, and secondly to encourage him to look critically at the traditional methods of analysis and design. The latter point is important, since all such methods require certain simplifying assumptions without which no solution is generally possible. Serious errors in design are seldom the result of failure to understand the methods as such. They more usually arise from a failure to study and understand the geology of the site, or from attempts to apply analytical methods to problems for which the implicit assumptions make them unsuitable. In the design of foundations and earth structures, more than in most branches of engineering, the engineer must be continually exercising his judgment in making decisions. The analytical methods cannot relieve him of this responsibility but properly used, they should ensure that his judgment is based on sound knowledge and not on blind intuition. I hope that the book will prove to be of use to students when their courses are over, and help to bridge the awkward gap between theory and practice.

An Attempt to Give Some Description of the Physical Geography, Botany, Zoology, Anthropology, Languages and History of the Territories Under British Protection in East Central Africa, Between the Congo Free State and the Rift Valley and Between the First Degree of South Latitude and the Fifth Degree of North Latitude

Based on the classic History of Broadcasting in the United States, Tube of Plenty represents the fruit of several decades' labor. When Erik Barnouw--premier chronicler of American broadcasting and a participant in the industry for fifty years--first undertook the project of recording its history, many viewed it as a light-weight literary task concerned mainly with "entertainment" trivia. Indeed, trivia such as that found in quiz programs do appear in the book, but Barnouw views them as part of a complex social tapestry that increasingly defines our era. To understand our century, we must fully comprehend the evolution of television and its newest extraordinary offshoots. With this fact in mind, Barnouw's new edition of Tube of Plenty explores the development and impact of the latest dramatic phases of the communications revolution. Since the first publication of this invaluable history of television and how it has shaped, and been shaped by, American culture and society, many significant changes have occurred. Assessing the importance of these developments in a new chapter, Barnouw specifically covers the decline of the three major networks, the expansion of cable and satellite television and film channels such as HBO (Home Box Office), the success of channels catering to special audiences such as ESPN (Entertainment and Sports Programming Network) and MTV (Music Television), and the arrival of VCRs in America's living rooms. He also includes an appendix entitled "questions for a new millennium," which will challenge readers not only to examine the shape of television today, but also to envision its future.

Effective Business Communications

Stickers are an essential part of the street art movement. Inexpensive and easy to produce, they act as a kind of informal business card for some graffiti writers, and a quick and effective promotional tool for many artists and illustrators. As more and more stickers are placed around major cities in the world, interest in the subject keeps growing. This all new follow on from the original Stickerbomb book is filled with a brand-new collection of 280specially-commissioned stickers by artists, illustrators, and graffiti writers from around the world, many of whom have not been featured in a publication before. It will appeal to a young market of designers, street artists, and illustrators, plus street art fans and anyone who collects stickers.

Analysis of Financial Data teaches the basic methods and techniques of data analysis to finance students, by showing them how to apply such techniques in the context of real-world empirical problems. Adopting a largely non-mathematical approach Analysis of Financial Data relies more on verbal intuition and graphical methods for understanding. Key features include: Coverage of many of the major tools used by the financial economist e.g. correlation, regression, time series analysis and methods for analyzing financial volatility. Extensive use of real data examples, which involves readers in hands-on computer work. Mathematical techniques at a level suited to MBA students and undergraduates taking a first course in the topic. Supplementary material for readers and lecturers provided on an accompanying website.

In the savage air combat over Guadalcanal and then the equally bloody air battles up Solomon chain, New Georgia and Bougainville, 13th Fighter Command took a back seat to Marine aviation in personnel, equipment, supply, operations, and publicity.

Dare to be a Champion

Law of Torts in Malaysia

The prediction of behavior of complex systems, analysis and modeling of its structure is a vitally important problem in engineering, economy and generally in science today. Examples of such systems can be seen in the world around us (including our bodies) and of course in almost every scientific discipline including such "exotic" domains as the earth's atmosphere, turbulent fluids, economics (exchange rate and stock markets), population growth, physics (control of plasma), information flow in social networks and its dynamics, chemistry and complex networks. To understand such complex dynamics, which often exhibit strange behavior, and to use it in research or industrial applications, it is paramount to create its models. For this purpose there exists a rich spectrum of methods, from classical such as ARMA models or Box Jenkins method to modern ones like evolutionary computation, neural networks, fuzzy logic, geometry, deterministic chaos amongst others. This proceedings book is a collection of accepted papers of the Nostradamus conference that has been held in Ostrava, Czech Republic in June 2014. This book also includes outstanding keynote lectures by distinguished guest speakers: René Lozi (France), Ponmathurai Nagaratnam Suganthan (Singapore) and Lars Nolle (Germany). The main aim of the conference was to create a periodical possibility for students, academics and researchers to exchange their ideas and novel research methods. This conference establishes a forum for presentation and discussion of recent research trends in the area of applications of various predictive methods.

Author Vizard covers blending the bowls, basic porting procedures, as well as pocket porting, porting the intake runners, and many advanced procedures. Advanced procedures include unshrouding valves and developing the ideal port area and angle.

Appropriate for courses in Structural Dynamics, Earthquake Engineering or Seismology. This is the first book on the market focusing specifically on the topic of geotechnical earthquake engineering. Also covers fundamental concepts in seismology, geotechnical engineering, and structural engineering.

An Introduction to Soil Mechanics and Foundations

This book provides an insight into the historical changes and present-day circumstances that have influenced, and continue to influence, the development and future of civil society. Civil society organisations (CSOs) play a crucial role in international development, however their impact on policy and practice is limited by a range of shifts across their political, social and financial landscapes. Barriers to Effective Civil Society Organisations is divided into three parts addressing each of these shifts in turn, and places particular emphasis on civil society actors linked not only by political constraints, but also by ethnic and cultural diversities that are crucial markers of political and social identity. This book draws on case studies from across Latin America, Africa, MENA and Ireland to highlight how CSOs in these countries are shaped by, and react to, shifting challenges. Reflecting on solutions for the sector, the authors provide an understanding of the various 'self-accommodation' policies and techniques employed by CSOs in order to continue their services and increase their credibility across global contexts. Aimed at researchers, policy makers and CSO/NGO workers looking to better understand the current state and future of the sector from the perspective of emerging scholars working in these regions, and in the Global South in particular, this innovative book is a celebration of the important work of CSOs and a reaffirmation of their right to sit at the policy table.

For the building industry, the installation of photovoltaic systems has become a new field of activity. Interest in solar energy is growing and future business prospects are excellent. Photovoltaics for Professionals describes the practicalities of marketing, designing and installing photovoltaic systems, both grid-tied and stand-alone. It has been written for electricians, technicians, builders, architects and building engineers who want to get involved in this expanding industry. It answers all the beginner's questions as well as serving as a textbook and work of reference, provides designers and installers with practical specialist knowledge needed to design and install high quality solar electric systems and gives a comprehensive overview of the major photovoltaic market sectors. Photovoltaics for Professionals contains over 100 full colour illustrations and covers: Marketing and promoting photovoltaics Solar cells, PV modules and the solar resource Grid-tied PV systems Stand-alone PV systems Practical step-by-step examples are described of how to go about installing systems right from the first customer contact and many useful tips are given to help avoid mistakes.

Organizes basic success principles into twelve universal laws. Each law is presented showing spiritual, biblical, and metaphysical foundations while demonstrating step-by-step action techniques to apply the law and get desired results. Each chapter is self-contained with summaries and review questions at the end. Perfect for readers who want to learn the keys to success and immediately put their knowledge into action.

Learn motorcycle riding and maintenance essential from Cycle World Magazine's resident expert in this comprehensive, fully illustrated guide. In Total Motorcycle Manual, industry insider Mark Lindemann shares his considerable firsthand knowledge gained from riding more than 750 different bikes over more than 30 years. Packed practical tips and tricks, this is the perfect guide for anyone who wants to get the most out of their motorcycle. Whether you ace starting as a new daily commuter, track fiend or budding off-roader, Mark will teach you how to get the right gear for you, tackle test rides, avoid lemons, maintain and tune your ride and master fundamental bike skills.

Building upon a long tradition of scientific conferences dealing with problems of reliability in technical systems, in 2006 Department of Computer Engineering at Wrocław University of Technology established DepCoS-RELCOMEX series of events in order to promote a comprehensive approach to evaluation of system performability which is now commonly called dependability. Contemporary complex systems integrate variety of technical, information, soft ware and human (users) administrators resources. Their complexity comes not only from involved technical and organizational structures but mainly from complexity of information processes that must be implemented in specific operational environment (data processing, monitoring, management, etc.). In such a case traditional methods of reliability evaluation focused mainly on technical levels are insufficient and more innovative, multidisciplinary methods of dependability analysis must be applied. Selection of submissions for these proceedings exemplify diversity of topics that must be included in such analyses: tools, methodologies and standards for modelling, design and simulation of the systems, security and confidentiality in information processing, specific issues of heterogeneous, today often wireless, computer networks, or management of transportation networks. In addition, this edition of the conference hosted the 5th CrISS-DESSERT Workshop devoted to the problems of security and safety in critical information systems.

When monsters appear on Earth, Maggie MacKay is on the job. No one is better at hauling the creepy crawlies back where they belong. No one, that is, except Maggie's dad, who vanished in the middle of an assignment. Now, an elf named Killian has shown up with a gig. Seems Maggie's uncle teamed up with the forces of dark to turn Earth into a vampire convenience store, serving bottomless refills on humans. Ah, family... The only hope for survival lies in tracking down two magical artifacts and a secret that disappeared with Maggie's dad. WARNING: This book contains cussing, brawling, and unladylike behavior. Proceed with caution.

Geotechnical Earthquake Engineering

Dio's Rome, Vol. 4 by Cassius Dio by Ashed Phoenix

The book provides insights into International Conference on Smart Innovations in Communications and Computational Sciences (ICSSICCS 2017) held at North West Group of Institutions, Punjab, India. It presents new advances and research results in the fields of computer and communication written by leading researchers, engineers and scientists in the domain of interest from around the world. The book includes research work in all the areas of smart innovation, systems and technologies, embedded knowledge and intelligence, innovation and sustainability, advance computing, networking and informatics. It also focuses on the knowledge-transfer methodologies and innovation strategies employed to make this happen effectively. The combination of intelligent systems tools and a broad range of applications introduce a need for a synergy of disciplines from science and technology. Sample areas include, but are not limited to smart hardware, software design, smart computing technologies, intelligent communications and networking, web and informatics and computational sciences.

Renowned designer and former US national team oarsman Jack Carlson's essential and glorious celebration of the classic rowing blazer and of rowing itself--now revised and expanded This handsome, eye-catching ode to the classic rowing blazer is a must-have for anyone who has roaed the rivers or cheered on their favorite crew. Classic American style was born in British bathhouses, where the very first blazers were created for college rowing clubs. This book, now revised and expanded, was created by champion rower Jack Carlson, who offers an insider's guide to the elaborately striped, piped, trimmed, and badged garments, as well as the stories, historic clubs, and races associated with them, and of course the elite athletes themselves. Featuring stunning photographs by "prep" guru F. E. Castleberry, Rowing Blazers is a visual feast, transporting readers to the highly atmospheric bathhouses, campuses, and team rooms of clubs around the world. This new edition features eight additional clubs, including the University of Tokyo and its top rival, Waseda University, and Row New York, a nonprofit organization stressing academic achievement as well as rowing prowess.

Although aquaculture as a biological production system has a long history, systematic and efficient breeding programs to improve economically important traits in the farmed species have rarely been utilized until recently, except for salmonid species. This means that the majority of aquaculture production (more than 90 %) is based on genetically unimproved stocks. In farm animals the situation is vastly different: practically no terrestrial farm production is based on genetically unimproved and undomesticated populations. This difference between aquaculture and livestock production is in spite of the fact that the basic elements of breeding theory are the same for fish and shellfish as for farm animals. One possible reason for the difference is the complexity of reproductive biology in aquatic species, and special consideration needs to be taken in the design of breeding plans for these species. Since 1971 AKVAFORSK, has continuously carried out large scale breeding research projects with salmonid species, and during the latest 15 years also with a number of fresh water and marine species. Results from this work and the results from other institutions around the world have brought forward considerable knowledge, which make the development of efficient breeding programs feasible. The genetic improvement obtained in selection programs for fish and shellfish is remarkable and much higher than what has been achieved in terrestrial farm animals.

Worldwide, in Africa and in South Africa, the importance of the doctorate has increased disproportionately in relation to its share of the overall graduate output over the past decade. This heightened attention has not only been concerned with the traditional role of the PhD, namely the provision of future academics; rather, it has focused on the increasingly important role that higher education - and, particularly, high-level skills - is perceived to play in national development and the knowledge economy. This book is unique in the area of research into doctoral studies because it draws on a large number of studies conducted by the Centre of Higher Education Trust (CHET) and the Centre for Research on Evaluation, Science and Technology (CREST), as well as on studies from the rest of Africa and the world. In addition to the historical studies, new quantitative and qualitative research was undertaken to produce the evidence base for the analyses presented in the book. The findings presented in Doctoral Education in South Africa pose anew at least six tough policy questions that the country has struggled with since 1994, and continues to struggle with, if it wishes to gear up the system to meet the target of 5 000 new doctorates a year by 2030. Discourses framed around the single imperatives of growth, efficiency, transformation or quality will not, however, generate the kind of policy discourses required to resolve these tough policy questions effectively. What is needed is a change in approach that accommodates multiple imperatives and allows for these to be addressed simultaneously.

A practical handbook, this second edition of a successful guide will prove itself valuable on a daily basis with its reliable and up to date facts and figures. The intent is to increase the reader's design efficiency with numerous design shortcuts, derivations of established design procedures, and new design techniques. Time-saving formulas, calculations, examples, and solutions to design problems appear throught.

At last, vegetarian and vegan food Bikers' style! In this brand-new collection of down-to-earth yet satisfying meat-free dishes, Si and Dave have gathered together their most hearty and warming comfort food ... that just happen to be vegetarian! Triple tested, with maximum taste and minimum fuss, these recipes are simply epic. Si and Dave have been on a mission. They've travelled the world to discover the very best meat-free recipes that shake off the dull and add the delicious. There's no meaty sacrifice here, just fantastic food.From the ultimate veggie curries to the perfect crowd-pleasing tray bakes, satisfying soups, pastas and pies to a veggie twist on burgers, barbecues and a banging breakfast brunch, The Hairy Bikers' Veggie Feasts is bursting with meat-free delights you'll turn to time and time again, all made with ingredients that can be bought easily and won't cost the earth.With savoury favourites like Chilli Bean Bake and Indian Shepherd's Pie, snacks including Pickled Onion Bhajis and Cheese and Marmite Scones, and sweet treats like Jammy Dodgers and the ultimate Chocolate Brownies, this new cookbook will be your meat-free bible.Si and Dave have made it even easier - and more delicious - to enjoy twist on. These recipes are a real turnip for the books ... so get cooking and enjoy.
