Sleep Disordered Breathing
in Children: A
Comprehensive Clinical
Guide to Evaluation and
Treatment is a
comprehensive, timely and
up-to-date review of
pediatric sleep disordered
breathing (SDB) and offers
a thorough focus on
several key areas: namely,
the normal development and
maturation of the airway
and breathing during
sleep, the techniques that

mechanism of action of enzymes. The discussions are organized around three themes: regulation of enzyme activity; the role of enzymes in the synthesis of nucleic acids and proteins; and proteolytic enzymes. Comprised of 33 chapters, this volume begins with an analysis of partial amino acid sequence of rabbit liver fructose 1,6-bisphosphatase and sites of cleavage by proteinases. The reader is then introduced to physiological inactivation of enzymes in yeasts; structure and functions of protein kinases; and control points in the citric acid cycle. Subsequent chapters focus on ligand binding properties and subunit interactions in yeast alcohol dehydrogenase; the role of water in the acceleration of an enzymatic reaction; DNA polymerases of human normal and leukemic cells; and the phylogenetic and developmental aspects of gastric proteinases and their zymogens. This book is intended for enzymologists.

**This open access book describes
marked advances in imaging
technology that have enabled the**

Ps

visualization of phenomena in ways formerly believed to be completely impossible. These technologies have made major contributions to the elucidation of the pathology of diseases as well as to their diagnosis and therapy.

The volume presents various studies from molecular imaging to clinical imaging. It also focuses on innovative, creative, advanced research that gives full play to imaging technology in the broad sense, while exploring cross-disciplinary areas in which individual research fields interact and pursuing the development of new techniques where they fuse together. The book is separated

Ps

into three parts, the first of which addresses the topic of visualizing and controlling molecules for life. The second part is devoted to imaging of disease mechanisms, while the final part comprises studies on the application of imaging technologies to diagnosis and therapy. The book contains the proceedings of the 12th Uehara International Symposium 2017, “Make Life Visible” sponsored by the Uehara Memorial Foundation and held from June 12 to 14, 2017. It is written by leading scientists in the field and is an open access publication under a CC BY 4.0 license.
