

## What Are Dodging Numbers

Why is there such a proliferation of economic discourses in literary theory, cultural studies, anti-sweatshop debates, popular music, and other areas outside the official discipline of economics? How is the economy represented in different ways by economists and non-economists? In this volume, scholars from a wide variety of disciplines and countries, from inside and outside the academy, explore the implications of the fact that the economy is being represented in so many different ways. They analyze what it means for scholars and activists in trying to make sense of existing representations--theories, pictures, and stories--of the economy. They also show how new representations can be produced and utilized to change how we look at and participate in current economic debates. By encouraging the mutual recognition of existing approaches and exploring the various ways economic representations function in diverse venues within and beyond mainstream economics, Ruccio has produced a book that is relevant to subjects as diverse as economic sociology and anthropology, political economy, globalization and cultural studies.

The Target: Aerospace Infinity, the company owned by former astronaut Buzz Caldwell and hosting organization of the Smithsonian Air and Space Museum’s paper airplane contest. Working together, the Whiz Kids must master the principles of aerodynamics, wind science, and gravity to win the contest to get closer to their target. The Catch: Nothing is ever as it seems, and Charlie suspects the mission is being led by someone who isn’t what she claims to be. And messing with the government could jeopardize their futures…

Bioethics is a multidisciplinary field of law and one that can not be ignored. Bioethical and Evolutionary Approaches to Medicine and the Law is a comprehensive, scholarly analysis of bioethics and the development of its standards. The book is broken up into the following four parts:
\* Part I deals with scientific, religious, ethical and legal aspects of bioethics
\* Part II evaluates 100 current bioethical issues and sets forth specific approaches for their resolution
\* Part III focuses on medical, legal and other problems from beginning of life (overpopulation, birth control, in vitro fertilization, etc.) through end of life (physician assisted suicide, advance directives, euthanasia, etc.)
\* Part IV discusses the major bioethical issues in genetics and genetic engineering.

The Cult of Statistical Significance shows, field by field, how "statistical significance," a technique that dominates many sciences, has been a huge mistake. The authors find that researchers in a broad spectrum of fields, from agronomy to zoology, employ testing that doesn't "test" and estimating that doesn't "estimate". The facts will startle the outside reader: how could a group of brilliant scientists wander so far from scientific magnitudes? This study will encourage scientists who want to know how to get the statistical sciences back on track and fulfill their quantitative promise. The book shows for the first time how wide the disaster is, and how bad for science, and it traces the problem to its historical, sociological, and philosophical roots.

Ticketing and concessionary travel on public transport, is the 5th report from the Transport Committee in 2007-08 session (HCP 84, ISBN 9780215514493). It examines the the aim of producing an integrated ticketing system across England, with the introduction of smartcard concessionary travel passes.The report inquires into the extent to which integrated ticketing on public transport has been achieved for all users; the issues regarding smartcards; arrangements for revenue protection (stopping fare-evasion) which will be affected by new forms of ticket; the impact of concessionary travel in England which is costing fl billion per annum. The Committee has set out a number of recommendations, including: the Committee believes that the Government in terms of promoting integrated bus ticketing has achieved too little of practical value; it recommends that Traffic Commissioners be given powers to arbitrate where bus companies and local transport authorities disagree; that coach travel should be given greater consideration in future statements of public transport policy; it is imperative that the full range of tickets, including multi-modal options be available at all main outlets so that the Government's aim of fare simplification can be better acheived (see The Future of Rail, Cm. 6233, ISBN 9780101623322); that the Government needs to ensure suitable guidelines on differential pricing is included in decisions on rail fares and rail franchises with particular reference to smartcards; that the Government needs to articulate a clearer strategy for the development of integrated ticketing in general and smartcards in particular; that the Government should move towards a unified system of public transport revenue protection; that the Department of Transport should commission an evaluation of the benefits of the national scheme for free local bus travel and that national concessionary travel is properly funded. These proceedings showcase the best papers selected from more than 500 submissions, and introduce readers to the latest research topics and developmental trends in the theory and application of MMESE. The integrated research topic Man–Machine–Environment System Engineering (MMESE) was first established in China by Professor Shengzhao Long in 1981, with direct support from one of the greatest modern Chinese scientists, Xuesen Qian. In a letter to Long from October 22nd, 1993, Qian wrote: “You have created a very important modern science and technology in China!” MMESE studies the optimum combination of man–machine–environment systems. In this system, “man” refers to the people in the workplace (e.g. operators, decision-makers); “machine” is the general name for any object controlled by man (including tools, machinery, computers, systems and technologies), and “environment” describes the specific working conditions under which man and machine interact (e.g. temperature, noise, vibration, hazardous gases, etc.). The three main goals of optimizing man–machine–environment systems are to ensure safety, efficiency and economy. These proceedings present interdisciplinary studies on concepts and methods from physiology, psychology, system engineering, computer science, environmental science, management, education, and other related disciplines. They offer a valuable resource for all researchers and professionals whose work involves interdisciplinary areas touching on MMESE subjects.

*Despite what we may sometimes imagine, popular mathematics writing didn't begin with Martin Gardner. In fact, it has a rich tradition stretching back hundreds of years. This entertaining and enlightening anthology--the first of its kind--gathers nearly one hundred fascinating selections from the past 500 years of popular math writing, bringing to life a little-known side of math history. Ranging from the late fifteenth to the late twentieth century, and drawing from books, newspapers, magazines, and websites, A Wealth of Numbers includes recreational, classroom, and work mathematics; mathematical histories and biographies; accounts of higher mathematics; explanations of mathematical instruments; discussions of how math should be taught and learned; reflections on the place of math in the world; and math in fiction and humor. Featuring many tricks, games, problems, and puzzles, as well as much history and trivia, the selections include a sixteenth-century guide to making a horizontal sundial; "Newton for the Ladies" (1739); Leonhard Euler on the idea of velocity (1760); "Mathematical Toys" (1785); a poetic version of the rule of three (1792); "Lotteries and Mountebanks" (1801); Lewis Carroll on the game of logic (1887); "Maps and Mazes" (1892); "Einstein's Real Achievement" (1921); "Riddles in Mathematics" (1945); "New Math for Parents" (1966); and "PC Astronomy" (1997). Organized by thematic chapters, each selection is placed in context by a brief introduction. A unique window into the hidden history of popular mathematics, A Wealth of Numbers will provide many hours of fun and learning to anyone who loves popular mathematics and science.*

*Since the 1960s, America's policymaking system has transitioned from one in which leaders like Lyndon Johnson could simply disparage the concept of budget projections to one in which policymakers consciously manipulate cost estimates. Paradoxically, the very safeguards put in place to thwart economically unsound legislation now cause chaos by incentivizing the development of flawed, even blatantly unworkable, policies. As Robert Saldin shows in When Bad Policy Makes Good Politics, the pathologies of the new system are illustrated by the Community Living Assistance Services and Supports Act and its role in aiding passage of President Obama's landmark health reform law. CLASS was supposed to bring much needed relief of America's dysfunctional long-term care system, but critics argued that its flawed design rendered the program unviable. However, what appeared to be a naïve proposal was actually a carefully framed policy designed to fit the rules of the game, particularly the Congressional Budget Office's cost-projection process. Although CLASS was destined for a "death spiral" requiring massive government bailouts, the CBO estimated it would save tens of billions of dollars. These official "savings" made CLASS an appealing add-on to the Affordable Care Act. But when the Obama administration later announced that CLASS was impossible to implement, America's long-term care system was left in crisis. This skillful examination of CLASS and the machinations of Congress provides insight into how the contemporary policymaking process really functions.*

*In Biscuits of Number Theory*, the editors have chosen articles that are exceptionally well-written and that can be appreciated by anyone who has taken (or is taking) a first course in number theory. This book could be used as a textbook supplement for a number theory course, especially one that requires students to write papers or do outside reading. The editors give examples of some of the possibilities. The collection is divided into seven chapters: Arithmetic; Primes; Irrationality and Continued Fractions; Sums of Squares and Polygonal Numbers; Fibonacci Numbers; Number-Theoretic Functions; and Elliptic Curves, Cubes and Fermat's Last Theorem. As with any anthology, you don't have to read the Biscuits in order. Dip into them anywhere: pick something from the table of contents that strikes your fancy, and have at it. If the end of an article leaves you wondering what happens next, then by all means dive in and do some research. You just might discover something new!

This annual referential report, has become an essential classic in the academic realm of Palestinian Studies. It includes the latest and most recent statistical and analytic data on the various developments related to the Palestinian issue. Al-Zaytouna Centre for Studies and Consultations issued its Palestinian Strategic Report 2010/11 (PSR 2010/11) which addresses the developments of the Palestinian issue in 2010/11. The PSR is considered one of the most important scientific studies published annually by Al-Zaytouna Centre. The Report is rich with information, analyses, tables and charts besides strategic visions and future outlooks. It is published for the sixth year in a row and it has become one of the major sources for experts and those interested in the Palestinian issue. It provides a comprehensive coverage of the developments of the Palestinian issue that happened over a year while abiding by strict scientific and professional standards. The Report is 444 medium-sized pages. It is co-authored by 15 researchers specialized in the Palestinian issue, reviewed by four consultants and edited by Dr. Mohsen M. Saleh. The PSR 2010/11 stresses that the uprisings witnessed in the Arab world since early 2011, especially in Egypt, will have a direct impact on the Palestinian issue. The impact will most likely be positive if the uprisings achieved their goals and yielded political regimes which express the real will of the Arab peoples. However, the Report notes that the internal affairs would most probably be the primary concern during the coming period. Regarding the inter-Palestinian reconciliation, PSR 2010/11 asserts that the reconciliation agreement signed in Cairo last May still needs more serious steps to end the division and achieve real reconciliation on the ground. It needs to resolve many obstacles through cooperation between the different parties, away from external interventions and pressures. On the Israeli level, the Report mentions that 2010 has continuously witnessed the inclination of the Israeli society towards the extreme right. It further notes the absence of any breakthroughs in 2011 especially in the light of Israel's rejection for the negotiations with President Mahmud 'Abbas. The agreement signed with Hamas and the PA's attempts to obtain international recognition of the Palestinian State in September 2011 hindered such negotiations. On the international level, the PSR says that the international diplomatic efforts towards the Palestinian issue have failed again in 2010. They could not achieve any significant progress regarding the peace settlement track or the siege imposed on the Gaza Strip. Moreover, PSR 2010/11 includes a large number of figures and statistics on Israeli violations on different levels. During 2010, 98 Palestinians were killed in the West Bank and Gaza Strip (including Jerusalem) by Israeli forces and settlers while 967 Palestinians and international solidarity activists were wounded. On the other hand, Israel's internal security service mentioned that during 2010, 9 Israelis were killed and 28 were wounded in operations carried out by the Palestinians.

Concerning settlement building, the Report shows that despite the 10-month Israeli moratorium on settlement building, Israel established 1819 buildings/apartments in 133 settlements all over the West Bank, including Jerusalem; in addition to 1433 mobile homes (caravans). PSR 2010/11 also discusses the increased Israeli attacks on the Islamic and Christian holy sites in Jerusalem and historic Palestine, during 2010. It further shows that the developments during that year revealed that the Judaization of Jerusalem has become the primary battle for Israel due to the obsession with the "Jewishness of the state" dominating the Israeli mind. Concerning demographic indicators, PSR 2010/11 mentions that at the end of 2010 the number of Palestinians around the world was around 11.14 million people. More than half of them, i.e., 5.75 million (51.6%) live in Diaspora, while the rest, i.e., 5.39 million (48.4%) live in historic Palestine. The latter are distributed by 1.28 million people in the territories occupied in 1948 and 4.11 million in the '67 territories. The Report mentions that if the current growth rates of the Palestinians and the Jews persist, the number of Palestinians and Jews will become on par by 2017 where each will reach around 6.53 million. Thus, in 2020, around 49.2% of the population will be Jews as their number will reach 6.87 million compared to 7.09 million Palestinians. Regarding the economic indicators in the West Bank and the Gaza Strip, the Report shows that events during 2010 has not affected the direct dependence of the Palestinian economy on the Israeli economy. In addition, the isolation of the Palestinian economy from the outside world continued due to the Israeli control of all international exits and Palestinian border crossings besides the Palestinian foreign trade. PSR 2010/11 also refers to the enormous difference between the Palestinian economy in the West Bank and the Gaza Strip on one hand and the Israeli economy on the other. Thus, it shows, for example, that in 2010 the Palestinian GDP per capita was \$1500 (around \$1925 in the West Bank and \$877 in the Strip) compared to \$28,500 in Israel. In addition, the GDP amounted to \$5.73 billion for the Palestinians compared to \$217.13 billion for the Israelis.

The CD-ROM contains Web-based material for extensive practice, as well as numerous examples, exercises, activities and tests.

For the rest of you, I'm assuming that you've watched the show. It's the best anime I've ever seen (But only because no one has made mine yet; please check out CORL: Tales From an Alternate RWBYverse volumes 1-3, available on Amazon.com.) And for those of you that haven't watched RWBY (or read CORL) yet, go do that. I'll wait. Now that you're back, let's get started. We're all here because we want to take part in the story unfolding on Remnant. We want to stand with team RWBY against Salem and the Grimm. We want a semblance of our own. We want a scythe that's also a sniper rifle. But if you're reading this, you don't get to do that. This is the GM guide, which means your players get to do all of that, and they get to have all of the fun. And that, dear reader, is your job. You are going to make this world fun for them. Remnant is a world of excitement and danger. No one is ever truly safe, even in the heart of the Kingdoms. As the GM, it is your job to bring that to life. You will use every trick in this book (and in your own heads, I hope) to threaten the safety of Remnant. It's people, cities, and even Kingdoms, are your targets. You will use Grimm, criminals, bandits, natural disasters, and anything else you can think of to harass, injure, threaten, and destroy the people and world that your players hold so dear. Because only in response to threats can heroes rise. When the fate of the world is in their hands, and everyone else has fallen or fled, your players can truly consider themselves Huntsmen.

The expanding use of money in contemporary Vietnam has been propelled by the rise of new markets, digital telecommunications, and an ideological emphasis on money's autonomy from the state. People in Vietnam use the metaphor of "open doors" to describe their everyday experiences of market liberalization and to designate the end of Vietnam's postwar social isolation and return to a consumer- oriented environment. Dreaming of Money in Ho Chi Minh City examines how money is redefining social identities, moral economies, and economic citizenship in Vietnam. It shows how people use money as a standard of value to measure social and moral worth, how money is used to create new hierarchies of privilege and to limit freedom, and how both domestic and global monetary politics affect the cultural politics of identity in Vietnam. Drawing on interviews with shopkeepers, bankers, vendors, and foreign investors, Allison Truitt explores the function of money in everyday life. From counterfeit currencies to streetside lotteries, from gold shops to crowded temples, she relates money's restructuring to performances of identity. By locating money in domains often relegated to the margins of the economy-households, religion, and gender- she demonstrates how money is shaping ordinary people's sense of belonging and citizenship in Vietnam.

With more than 20 years of coaching and teaching experience, authors Anthony Dowson and Keith Morris have developed and adapted an array of activities and games from their own everyday use when teaching children. Inside you will find a range of warm-up ideas, games, skill practices and sport-specific activities to motivate children and encourage active participation. Anyone who has the responsibility of organising activities for young people will find these ideas invaluable. Useful in both planning and providing physical education lessons and recreational experiences, this book will make it easy for you to create a varied and exciting physical activity program.

A comprehensive resource that offers an introduction to statistics with a Bayesian angle, for students of professional disciplines like engineering and economics The Bayesian Way offers a basic introduction to statistics that emphasizes the Bayesian approach and is designed for use by those studying professional disciplines like engineering and economics. In addition to the Bayesian approach, the author includes the most common techniques of the frequentist approach. Throughout the text, the author covers statistics from a basic to a professional working level along with a practical understanding of the matter at hand. Filled with helpful illustrations, this comprehensive text explores a wide range of topics, starting with descriptive statistics, set theory, and combinatorics. The text then goes on to review fundamental probability theory and Bayes' theorem. The first part ends in an exposition of stochastic variables, exploring discrete, continuous and mixed probability distributions. In the second part, the book looks at statistical inference. Primarily Bayesian, but with the main frequentist techniques included, it covers conjugate priors through the powerful yet simple method of hyperparameters. It then goes on to topics in hypothesis testing (including utility functions), point and interval estimates (including frequentist confidence intervals), and linear regression. This book: Explains basic statistics concepts in accessible terms and uses an abundance of illustrations to enhance visual understanding Has guides for how to calculate the different probability distributions, functions , and statistical properties, on platforms like popular pocket calculators and Mathematica / Wolfram Alpha Includes example-proofs that enable the reader to follow the reasoning Contains assignments at different levels of difficulty from simply filling out the correct formula to the complex multi-step text assignments Offers information on continuous, discrete and mixed probability distributions, hypothesis testing, credible and confidence intervals, and linear regression Written for undergraduate and graduate students of subjects where Bayesian statistics are applied, including engineering, economics, and related fields, The Bayesian Way: With Applications in Engineering and Economics offers a clear understanding of Bayesian statistics that have real-world applications.
